TRAKKEM pro ®

TRAKKEM pro ®

TRAKKEM PRO gives you the ability to continuously monitor the status of your shipment at every point of its journey . With continuous and timely updates, you can track the status of your shipment remotely via any device (laptop, tablet or smartphone).
With our TRAKKEM PRO service, your company is choosing the best Logistics 4.0 business intelligence tool available.

Location tracking technologies

TRAKKEM PRO receives mixed location data from multiple sources scattered all over the world. It sends back its position along with encrypted sense-tracking data through cellular networks. No concern, no loss.

● Big Data

TRAKKEM PRO proprietary web application is designed to incorporate and process real-time data at a large scale. Locate an individual item, or filter data by location or groups with Google or Bing-like enquiries without the annoyance of complex SQL databases or old-style and bulky data repositories.

● Machine Learning

TRAKKEM PRO uses machine learning techniques to learn logistics patterns and company business behavior. AI-based algorithms allow for the reduction of time-consuming operations and help you to predict your customer's needs.
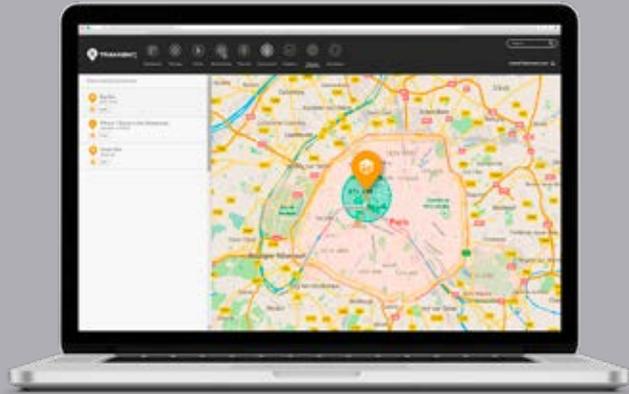

Supply Chain

TRAKKEM PRO allows your company to play a key role, as does a thorough understanding of all data and insights and actionable intelligence for supply chain management.

Logistics 4.0

With **TRAKKEM PRO**, you can take virtual sensing from any enabled tracking device and its embedded sensor wherever , with live information fetched from the Cloud. Unlimited data storage and AI-based technology allows the customer to access shipment history, polished charts, business intelligence trends, and good-looking reports.

How it works

TRAKKEM PRO receives location data, sensor status and tracking updates along with critical activity alerts from multiple sources scattered all over the world. It sends back its position regardless of whether the delivery of the shipment is taking place by air , road, rail or sea. All information is encrypted and enhanced by the proprietary machine learning algorithms. No concern, no loss.

How it works

TRAKKEM PRO integrates granular information gathered from multiple raw data sources. Thanks to advanced location-based services and machine-to-machine (M2M) technology, the shipment status is always available. There are almost no limitations on device or location, meaning customers have access to up-to-the-minute tracking information.

How it works

TRAKKEM PRO gives you full insights from Big Data, automatically shortening information, unveiling trends, and detecting errors. Analytics can be managed to perform predictive pathways, cut down energy footprints, reduce efforts and save money. All the operations are driven by the control room. A full report can be exported anytime.
